

Legacy Woodland

The climate is changing and we are struggling to figure out just what to do!

In one hundred years from now, will our children's children look back and despair at our inaction?

There are many clever and influential people out there trying to find **solutions**, and there won't be just one, but many. I want to **do something here and now**.

One simple suggestion... Legacy Woodland

If you have seen pictures of Redwood Trees in Sequoia National Park you will have marvelled at the largest living beings in the world, some Redwood trees reach over 100 metres tall, 2500 years old and **capture 800 tonnes of CO2 each!** Our giant breathing silent counterparts.

Plant a woodland today for future generations. A woodland that will sequester CO2, regulate local temperatures and ground water, enhance our wellbeing and provide inspiring natural heritage for thousands of years, long into our future around the country and possibly the world.

Imagine in 3015, Legacy Woodland would mark 1,000 years since our awakening and responsible stewardship of our Earth, and will be a historic marker of our evolution comparable even to the pyramids.

The earth provides all the support we need - every breath, mouthful of food and water. **Create a positive legacy today** to improve our environment and be proud of.

The obstacle here today is land, safe land to plant our Legacy Woodland, some help and a little money.

If this is something you would like to get involved with please contact me.
